

## LABORATORY CAPABILITIES

Laboratory analytical capabilities include inorganic, organic and physical parameter testing of samples with a variety of matrices, including water, wastewater, soils and sludges, fuels, vegetation, animal tissue and air. Microbiological testing is available for surface and drinking water.

### Sample Types Analyzed:

Drinking Water

Surface Water

Ground Water

Waste Water

Soil

Sediment

Sludge

Fuels

Fish Tissue

Plant Material

Air Filters

Paint

Dustwipes

Chlorophyll

### Tests Available:

Trace Metals

Minerals

Nutrients

Bacteria

THMs

Pesticides

Herbicides

VOCs

SOCs

Particulate Matter

Other as needed
